

Environmental Policy

ASG Fabrications Ltd is endeavouring to work towards minimising the impact our business has on the environment and our carbon footprint. Every employee is encouraged to constantly seek and find better and more environmentally friendly ways of working. Areas we actively reduce our carbon footprint;

- Switching off any electrical equipment/appliance when not in use.
- Keeping windows and doors closed to minimise heat loss.
- Re-using paper/envelopes etc. and introducing recycling opportunities wherever possible.
- Reducing or even eliminating waste, pollution and emissions by redesigning our processes and products.
- Recycling and re-using any mild or stainless steel offcuts.
- Fostering a culture of continuous improvement and development.

We encourage our employees to make any suggestions or if they have ideas on how we can effectively make further improvements and reductions on our carbon footprint, viable suggestions are discussed between Directors and Department Managers and implemented accordingly.
